THE LITTLE BOOK OF EARLY CHILDHOOD STUDIES AT BROOKES
What will I study?

You will learn about how very young children grow and develop. Examine how toddlers make sense of the world around them through play and interaction with adults, both in the family and in different cultures.

You will observe and work with young children in different settings. This practical, hands-on experience will support the theory you learn in class.

As you progress through the course, you can focus on the particular areas of study that interest you most. We have a diverse range of modules available, including specialisms in outdoor learning, literature for young children, and childhood and the media.
Course highlights

- Explore this fascinating stage of human development, and discover how children learn and grow.
- Examine the cultural experiences of children from a range of perspectives.
- Equip yourself for a career in the early years sector, with both professional and academic skills, as well as hands-on experience.
I was attracted to the programme by the balance of theory and practical experience involved. I felt that the placements offered allowed me to gain valuable practical experience to help make a decision about what career to pursue.

BECKY TURNER, EARLY CHILDHOOD STUDIES GRADUATE
Work placements

You will go on placements in a range of early years settings during your course to help you make links between theory, research, and practice.

During Years 2 and 3 there are extended placement modules where you will gain direct practical experience of working with young children and early year’s professionals.

In your final year you may choose a placement according to your particular interests, for example working with children with special educational needs or with educational charities.
Teaching experience in South America

You will have the opportunity to teach in a bilingual school in South America for twelve weeks. You will stay with locals in their homes, and help to teach children in the classroom.

It offers the ideal opportunity to gain work experience and employment skills, whilst also giving you the chance to live abroad and immerse yourself in the local culture.
International visits

We are keen to explore ways in which you can broaden your experience of education and development. We do this by organising visits to countries such as The Gambia, where we have developed long-standing relationships with schools and colleges. The School of Education also runs an exchange scheme with Orebro University, Sweden and the University of Stavanger in Norway.

Please note that the costs of any optional field trips are not included in your course fee and a separate fee will apply.
“Oxford is a beautiful place to study, with beautiful surroundings and opportunities to do various different activities. I like that the course is situated at Harcourt Hill. It is quiet and peaceful so easy to do work at, yet town is only a short journey away for when you want to go somewhere with a bit more going on.”

MOLLIE PEARCE, EARLY CHILDHOOD STUDIES GRADUATE
Research and expertise

Research in the department spans learning and development from the early years through primary, secondary, further and higher education, including work-based and lifelong learning. Academic staff in the department work in an environment that brings together education, psychology and health sciences.

We encourage you to become a researcher in your own right across a range of modules, leading up to a dissertation in your final year.

By designing and undertaking your own research you will develop excellent analytical and independent study skills to support your CV.
of our research is internationally recognised
